

Explanation of Rally Point Scoring

A point is scored every rally. The server continues serving until that side loses a rally. An even score serves from the right-hand court (the **even** court) and an odd score is served from the left-hand court (the **odd** court) no matter who is serving.

In the scenario below, we have partners **A** and **B** opposing **C** and **D**. Team **A** and **B** will serve first. Player **A** will serve first and call the score 0 - 0 (there is no server number). Since their score is 0, **A** will serve in the **even** (right) court.

If **A** and **B** win the rally, they get the point and player **A** then calls out the score of 1 – 0 and then serves in the **odd** (left) court. **A** continues serving until their side loses the rally.

If **C** and **D** win the rally, they get the point and player **C** now calls out the score of 1 – 0 and serves from the **odd** court on their side since they have 1 point because they won the previous rally.

STAGE

A	B
C	D

Games end when a team reaches 15 points provided there is a minimum difference of two points in the score. Otherwise play continues until a two-point difference is achieved or when a team reaches 21 points whichever comes first. If there more than 16 players games will stop when a team attains 15 points.
